1575 Sawdust Road, Suite 400,  
The Woodlands, Texas 77380

Mr. Ryan Schilhab, PE

281-363-4039

Please contact the District Engineer, Ryan Schilhab, with any questions regarding this project.

## SANITARY SEWER REHABILITATION PROJECT

This notice aims to inform the resident that the Contractor, who is working under contract for Bridgestone Municipal Utility District (the District), will be cleaning and televising the underground sanitary sewer system that serves your home during the next few weeks. If you received this notice on your door, the Contractor plans to perform the work in the vicinity of your home within the next 48-72 hours. **This work does not require residents to be home, and at no time will field crews have to enter your home or business.**

Field crews may require access to your property if a sewer manhole or similar structure is located in an easement on or adjacent to your property which may be located in your backyard. **Your cooperation in providing access is critical to the sanitary sewer cleaning and televising and is much appreciated. In that regard, if a manhole is in your backyard, we request that you please restrain or relocate pets and unlock gates from 8:00 a.m. to 5:00 p.m. during this period. If you have questions about whether a manhole is located in your backyard, please call your District Operator or Engineer, whose contact info is listed in the left column.**

Cleaning and televising the sanitary sewer will involve the Contractor running a high-pressure water jet through the line to remove foreign materials and pulling a remote-controlled camera behind the jet to inspect the sanitary sewer system. You will see two trucks set up on the street near the manholes on either end of the line during this time. One truck will contain video equipment, and the other will be vacuuming the water and waste.

A rush of pressure generated by the water jet can force air to come through your home's sewer pipes, causing some minor backflow. Covering your drains and toilet lids will prevent a potential backflow. If a backflow does occur, please contact your District Engineer, and we will arrange for the area to be cleaned.

## ACTION REQUESTED

**We request that ALL residents who receive this letter do the following during the next 72 hours or until you no longer see the Contractor working in the area:**

1. Unscrew your sanitary sewer service lateral clean-out cap. (This is located in your yard between the house and the sewer main, and it is usually a 4" threaded PVC plastic cap.) This will help prevent sewer smells from entering your house and the possibility of a sewer back-up into the house or building. Please note that your home may not have a clean-out cap, or it may be buried.
2. Minimize water usage. Please note that your water will not be turned off.
3. Place towels in sinks and bathtubs covering the drains, and close toilet lids.
4. Remove structures such as flowerpots, sheds, decks, bird baths, debris, etc., from on top of any sanitary sewer manhole on your property.
