SANITARY SEWER REHABILITATION PROJECT

This notice aims to inform the resident that the Contractor, who is working under contract for Bridgestone Municipal Utility District (the District), will be repairing the sanitary sewer manhole adjacent to your property during the next few weeks. If you received this notice on your door, the Contractor plans to perform the work in the vicinity of your home within the next 48-72 hours. **This work does not require residents to be home, and at no time will field crews have to enter your home or business.**

Field crews may require access to your property if a sewer manhole or similar structure is located in an easement on or adjacent to your property which may be located in your backyard. Your cooperation in providing access is critical to the manhole repair process and is much appreciated. In that regard, if a manhole is in your backyard, we request that you please restrain or relocate pets and unlock gates from 8:00 a.m. to 5:00 p.m. during this period. **If you have questions about whether a manhole is in your backyard, please call your District Operator or Engineer, whose contact info is listed in the left column.**

Sanitary sewer flows produce hydrogen sulfide and sulfuric acid, which over time, will corrode the walls inside the concrete, brick, or fiberglass manholes. This corrosion can lead to infiltration of water during heavy rain events creating sanitary sewer backups and overburdening wastewater treatment plants. This corrosion can also degrade the structural integrity of the manhole, which could result in a manhole collapse. The Contractor will be applying an epoxy resin or a cured-in-place liner to the walls of the manholes to protect them from future corrosion.

ACTION REQUESTED

We request that ALL residents who receive this letter do the following during the next 72 hours or until you no longer see the Contractor working in the area:

1. Remove structures such as flowerpots, sheds, decks, bird baths, debris, etc., from on top of any sanitary sewer manhole on your property.

Please contact the District Engineer, Ryan Schilhab, with any questions regarding this project.
